Sex:	Male	Location:	Southern Urology, PA
Birthdate:	May 6, 1943	Location Address:	139 Fairfield Drive Hattiesburg, MS 394021303
		Location Phone:	601-450-2401

Chief Complaint

- Prostate cancer
- BPH

History Of Present Illness

This is a 71 year-old male inmate from East MS Correctional Facility with a history of prostate cancer and elevated PSA. 3 prostate biopsies by Dr David Owens in Ocean Springs, MS starting in 2006 and last in 2010 and told he had gleason 6 prostate cancer. He has been on watchful waiting. He states PSA initially about 6 and last in 2010 about 22. Prostate biopsy 11/13/12. Pathology showed atypical in RLA and Gleason (3+3) RLM.

He presents to clinic for follow-up. He is taking Flomax daily. He states he still has syncopal episodes and does not feel Flomax has changed them and unknown source. He states he had bone scan on MS coast 8/13 negative for obvious mets. He has slight hesitancy. No hematuria, dysuria, frequency, urgency or incontinence. CT stone protocol 4/14 no stones. He still wants nothing done with his prostate cancer and understands the risks of mets and pain, suffering and death.

PSA
32.6 4/8/14
22.7 10/5/12

Past Medical History

Asthma; Benign Essential Hypertension; Blind; CAD; Cystitis - Acute; GERD; Hypercholesterolemia; Malignant Neoplasm - Prostate

Past Surgical History

back; Coronary Stent; PROSTATE BIOPSY; Transrectal Ultra Sound Biopsy
